LS Central Demo items catalogue – Printing instructions

The *LS Central-Demo-items-catalogue.pdf* document includes examples of demo data items that are part of the LS Central demo data company released with LS Central.

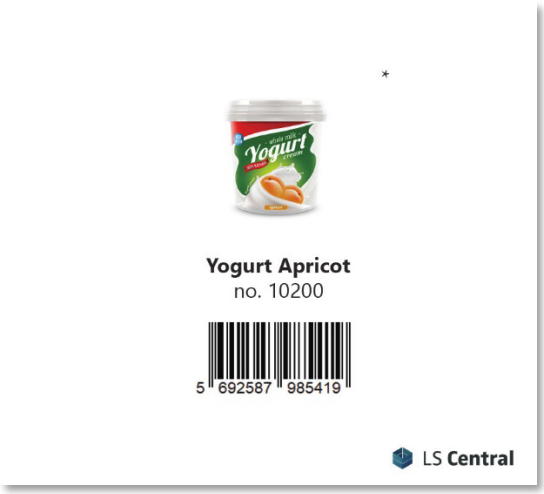
One A4 page in the printing catalogue includes two retail items, with image and barcode. Some items are part of different offers and for those there is additional information on the back page.

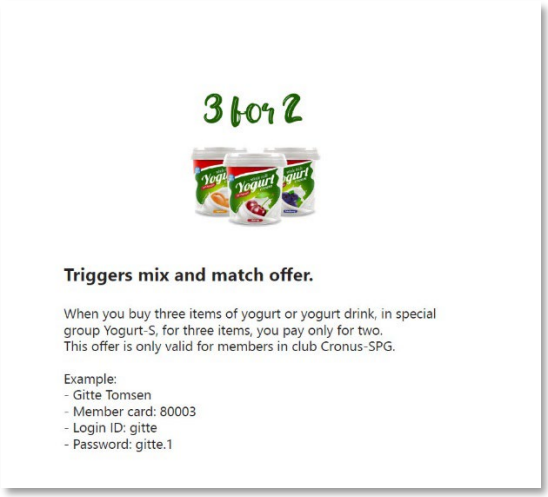
Two stacks of retail items are included in this document – the grocery (pages 1-32) and general one (page 33-58). Below you will find the instructions how to assemble it.

Note:

- An item with the * sign has information on the back page
- Barcodes that have a specific variant, the variant description is printed by the side of the image

Example:



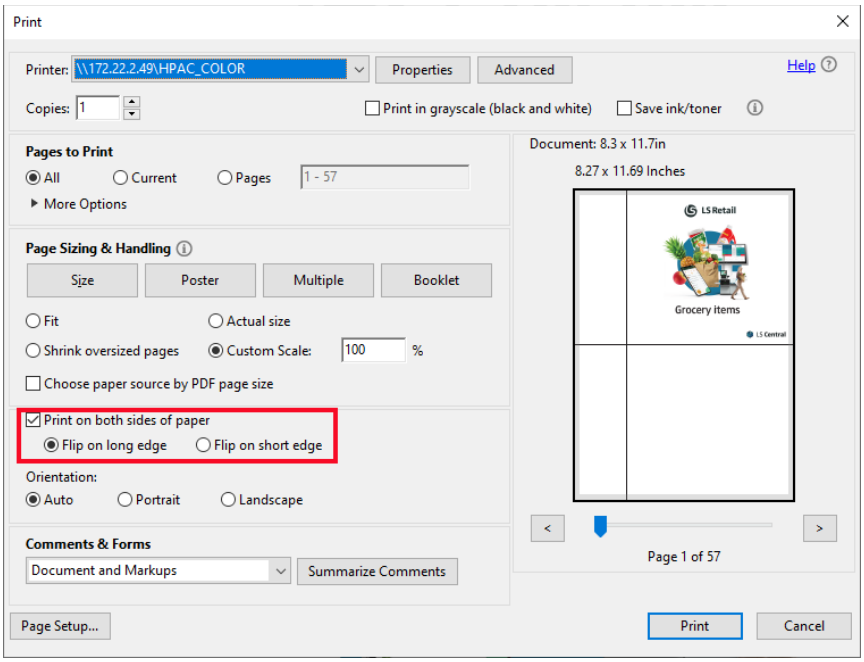


1. Type of paper to use

For practical usage it is recommended to use thicker than thinner paper, for example between 120 – 200 g.

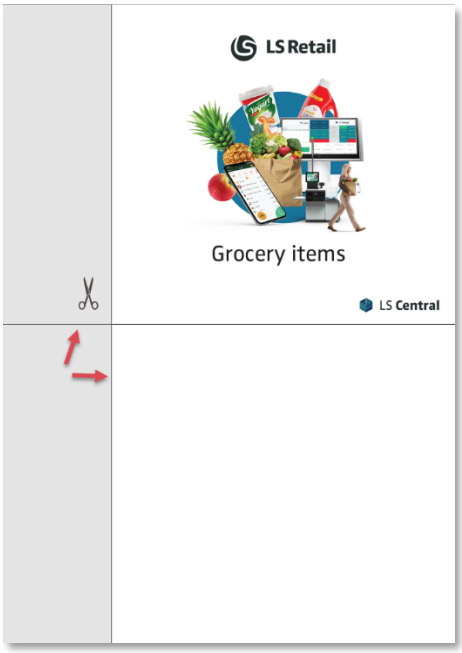
2. How to print

Print the document on both sides and mark to flip the page on long edge. If you prefer to use the grocery items only then select the rage of pages to be printed from 1-32, and 33-58 in case of general items.



3. Where to cut

Cut the paper according to the guidelines on the first page. One A4 page includes two retail items.



4. Binding options

The stack of cards can be bound using multiple techniques. We recommend using an openable roundel/keychain as on the picture below. First use a puncher and create a whole in top left corner.

Then use the roundel to bind the pages together. This technique allows you to easily flip through the pages, add more pages to the retail items stack or simply take out pages that are unnecessary. Otherwise, the stapler can be used to bind the pages together.
