

Stop overcomplicating your life.

Gain control of your restaurant, your finances and the guest experience with a unified restaurant solution

Many restaurant businesses think they don't need a new software solution. Until they see what a difference a unified platform makes.

With LS Central for restaurant and food service businesses, servers can send orders directly from the POS to the kitchen, where the dishes are shown in the correct production order on the KDS (Kitchen Display System). And when the dish is ready, the front staff sees it on the POS, so everything is delivered quickly. The benefits continue in the back of house. You can set prices, offers and menus centrally, and send them to all your locations instantly. You can track ingredient usage, and decrease waste. You can see what sells or doesn't, and take action.

The best part? No software integrations, no manual work, no unclear or delayed data. All the functionality you need, from front of house to kitchen to head office, within a single software solution.

This is what your restaurant software could be like. This is what restaurant software should be like.

LS Central is the SaaS unified platform built on Microsoft Dynamics 365 Business Central.

Delight guests

Grow loyalty:

- ✓ Send guests special offers and promotions based on their tastes and preferences
- ✓ Track reservations, offer catering services and cooking courses – and manage all of these within the same unified commerce platform
- ✓ Let your guests personalize dishes adding or removing ingredients
- ✓ Easily split bills, and move them across tables, or areas
- ✓ Offer self-serve options
- ✓ Create loyalty programs that drive returns

LS Central: one platform to cover your whole restaurant enterprise

Head office

Keep control over your business centrally.

- ✓ Optimize ingredient ordering and reduce waste
- ✓ Create and maintain menus, offers, prices, deals and promotions
- ✓ Set allergen and nutritional content information
- ✓ Configure and manage locations and POS
- ✓ Handle stock, replenishment and forecasts
- ✓ Manage vendors
- ✓ Create and share BI reports

Back of house

Manage daily tasks effectively.

- ✓ Oversee and manage operations
- ✓ Handle cash, reports and end-of-day
- ✓ Manage staff permissions, rosters, and communications
- ✓ Receive stock and manage adjustments
- ✓ Manage kitchen displays and printers
- ✓ Handle takeout, delivery and drive-thru
- ✓ Keep track of sales and performance

Front of house

Deliver great, rapid service.

- ✓ Take orders and payments on stationary and mobile POS
- ✓ Give customers many secure payment options
- ✓ Send orders straight from the POS to the kitchen, and track their preparation status
- ✓ Modify dishes, and qualify them as starters, mains, etc.
- ✓ See ingredient and menu information at the POS
- ✓ Offer self-serve at kiosks, at the table or at drive-through
- ✓ Manage loyalty program members

Do more with less effort and cost with a SaaS platform

Lower capital expenditure

Save money on servers, on capital costs for software, and even on system engineers and specialists. No need to install and run apps on-premises, no need to factor in upgrades. It's all included in the subscription price.

Stay agile and up to date

Do you need advanced AI functionality? Would you like to implement voice ordering? In the cloud, you can take advantage of the latest features without needing costly upgrade or integration projects. Plug into the add-ons you need, quickly and at a fraction of the cost than in a traditional setup.

Access your business data and BI reports where and where you are

No matter if you are home or travelling; you can stay on top of your sales, trends and business insights. See, manage and share reports, and always act at the right time, no matter where you are.

Keep your data secure

Hardware issues? No problem. You can always access your data in the cloud. Microsoft Azure guarantees a 99,995% uptime, and top safety features.
